

Releasing tools for professional wiring repair

- ✓ **Removal of various contact systems from housings**
- ✓ **Non-destructive removal**

Releasing Tools for all contact systems

The latest advances in automotive electronics offer convenience and smart applications for all customers. However, these advances also present significant challenges for repair shops, including limited space, numerous contact systems, and manufacturer-specific solutions.

To get your car fixed quickly and affordably, you also need the right tools for the different contact systems.

Assembled releasing tool kits for special needs

Our professional releasing tools are the solution.

Along with our individually available releasing tools, we offer vehicle- and application-specific tool kits too.

They're always being adapted to the market and delivered in handy cases.

Universal Releasing tools for housing lockings

For removing, opening or unlocking housing lockings (secondary lockings)

Most housings come with additional security lockings that ensure the contact is properly installed and won't drop out. This ensures safe and long-lasting performance.

Using the wrong tool to repair this lock can cause short circuits and malfunctions, which can be especially dangerous in critical safety environments.

Universal Releasing tools with one blade

For unlocking housings with 1 primary locking

Our universal tools with one blade are the perfect solution for contacts installed in housings with one locking tab to hold the contact in place.

In order to remove the contacts without damaging them, the housing, or the tool, the blade must fit precisely and be strong enough to apply the necessary force.

Universal Releasing tools with two blades

For unlocking housings with 2 primary locking

Our universal tools with two blades have been specially developed for contacts that are installed in housings with two locking tabs to hold the contact in place.

To ensure the safe removal of contacts without damaging the housing, blades must fit precisely and be strong enough to apply the necessary force.
